To: info-hams@ucsd.edu

I am new to the scanning world. In my new scanner's book, there's a frequency allocation list which contains the following:

806.000 - 816.000 Domestic Public (Mobile)  
816.000 - 821.000 Mobile Trunking  
851.000 - 861.000 Domestic Public (Base)  
861.000 - 866.000 Base Trunking

Could someone tell me what the above terms mean? who is using the above frequencies? what is in between 821.000 - 851.000 and 866.000 - 902.000? (is that cellular!) Is there an up to date frequency list on the net?

Also I would like the mods for the pro-2006. I already tried removing D502 on the front panel and it gives back 800Mhz stuff but what does D504 do? I hear the unit can be modified to scan faster and to have up to 1600 channels. Any help would be appreciated. I remember reading about these mods here before but that was before I bought my unit.

Since I had been experiencing the same response, I inquired of Devon, marvin's keeper, who replied:

>Yes, marvin blew a disk and we're having a bit of trouble getting the  
>machine back up again. I may have to move the system to another machine  
>when I get the time.
